

Extract 1

There are strategies needed in the implementation of Chronic disease prevention requires the use of several strategies. One First, it is important would be to have a readily available workforce that is concerned with the prevention of chronic diseases in the health sector, a workforce that will deliver adopt the necessary needs measures regarding the prevention of chronic diseases in the health sector (Jacobs, 2012). Another strategy is having to have a strategic partnership that is between all stakeholders, in particular the government, stakeholders, healthcare organisations and, different sectors as well as the community, to come up with in the implementation of measures that support the promotion of good health and facilitates innovation of in good methods of disease prevention and control ng and containing the diseases (Jacobs, 2012). Another strategy is having In addition, it is necessary to developed and better equipped health centers with the infrastructure and technology in the health centers that can be used in the prevention of chronic diseases activities and that can also be used in for monitoring trends of in patients with chronic diseases. The exclusion of any of these implementation strategies is bound to have a negative n impact on in the prevention of chronic diseases.

To answer assess if Amazon is a good employer, we need to analyze the advantages and the disadvantages of working there. While On the one hand, a person comes to office as a every new office worker, he receives a backpack with all necessary equipment, such as a power adapter, and a laptop, for work and a bus pass to get to work for free. Parking is cheaper for the employees too, and the company's cafeteria has serves healthy meals which is not subsidized. The company Amazon attracts those who want to learn, to invent, to and meet new interesting people and provides with. The priceless experience, which is recognised as such by former employees from the job those who left called priceless. On the other hand, The other side of it is a complaint that Amazon has does not have enough connection between its departments, which. That makes it difficult to deliver high-quality service to the customers. Furthermore, the bureaucracy of a big company and the lack of mechanisms, the need to leave all cases when an to effectively resolve issues with the clients and the CEO hinder job satisfaction unsatisfactory comment comes and personal peculiarities of the CEO made the job unpleasant (Stone, 2013). The big number of disadvantages cross the good ones. Despite the great number of disadvantages, P people still want to work there at Amazon for some time to gain put a new line entry in on their CVs.

Extract 3

~~SMEs usually defined as small and medium microfinance that offers financial facilities to a certain group.~~ One of the characteristics of small and medium-sized enterprises (SMEs) is that they have a small amount of workforce and, the same time, offers a large financial turnover. SMEs have been a large part of the economy for a very long time as they provide services in that it offers facilities to a large-high percentage of people. The ~~paper current study will tend to examine~~ how-what innovation in SMEs has ~~evolved-occurred~~ and ~~in some extent~~ how it has the economic performance of SMEs has increased-changed the performance generally in the economy. The study ~~will measure~~ uses ~~the data for-obtained from~~ 400 respondents to measure the effect of innovation ~~in-on~~ SMEs. ~~200 of the respondents was taken from~~ were recruited to the study-publishing the online questionnaire online to find out a wide variety of views from-of a wide variety of individuals. ~~The rest of the 200 was collected~~ Other respondents were recruited physically from from the local SMEs. ~~Thus, Overall,~~ the sample of the whole paper indicates a total-comprised of 400 respondents. The main purpose of having a large sample is ~~because in the current economy SMEs serve a special function to ensure growth and development~~ to assure the validity of the research. ~~The results of the~~ Thus, it was important to conduct a study that would be able to build the relationship will help to determine the association between innovation and ~~the~~ performance of ~~the~~ SMEs.

The US is a multinational country, where different nationalities try to assimilate-accustom to not usual for them conditions ~~for them.~~ At the same time, some nationalities demonstrate slow assimilation. For example, although Polish and Haitian people have been both part of the US population during thefor a long historical period. Neverthelesstime, these two nationalities-minorities are a great example of how different nationalities even after long life in the US are still totally-very different distant and react ~~on-to~~ various challenges differently. In particular, the Polish and the Haitian living in America have different Hhealthcare cultures, ~~is not an exception since Polish and Haitianincluding healthcare~~ practices and beliefs, and differ from the US population by being more neglectful of-varies on many stages but have the same result— passivity and neglecting healthcare.

Extract 5

In this paper, we elaborate upon the work of Qian et al. ~~we are~~ proposing a solution that makes for use-once DNA computations renewable. Renewable DNA logic circuits are possible due to ~~We report~~ a novel design which strategy for renewable DNA logic circuits. ~~The basic construction~~ is inspired by Qian's seesaw motif, but is ~~We designed a basic motif~~ based on the DNA hairpins. The developed design packs two reaction cycles in a single gate, so that. ~~Using~~ hairpins helps to renew the gate once the reverse process starts. The experiments have demonstrated that ~~the~~ proposed motif and AND and OR gate can be reused ~~were demonstrated to be reusable for~~ multiple times. In particular, Experiments show circuit restoration with some signal loss is performed in every cycle of reuse.
